

REMARKS

This Application has been carefully reviewed in light of the Advisory Action mailed April 25, 2006. In order to advance prosecution of the present Application, Claims 1, 8, 14, and 21 have been amended. Applicant respectfully requests reconsideration and favorable action in this Application.

The Examiner issued a Final Action on February 15, 2006. Applicant submitted a Response to Examiner's Final Action on April 17, 2006. The Examiner issued an Advisory Action on April 25, 2006 stating that the Response to Examiner's Final Action would not be entered because it raised new issues requiring further searching and consideration. Applicant respectfully requests continued examination of this Application so that the Response to Examiner's Final Action can be entered and considered by the Examiner pursuant to this Request for Continued Examination. For the convenience of the Examiner, the amendments made to the claims in the Response to Examiner's Final Action and the accompanying comments are repeated herein.

Claims 8-13 stand rejected under 35 U.S.C. §112, second paragraph, as being indefinite. Claim 8 has been amended to address matters raised by the Examiner. Therefore, Applicant respectfully submits that Claims 8-13 are in accordance with 35 U.S.C. §112, second paragraph.

Claims 1-29 stand rejected under 35 U.S.C. §102(e) as being anticipated by Cajolet. Applicant respectfully traverses this rejection.

Independent Claim 1 recites ". . . providing one or more samples of the rendered first or second frames for the render job to the client prior to completion of rendering of the first or second frames the first and second servers." By contrast, as shown in col. 10, lines 34-37, of the Cajolet patent, the assisting computer completes its portion of the

task and then returns its results to the problem dispatcher. There is no disclosure in the Cajole patent that its assisting computer provides samples of rendered frames prior to completing its portion of the render job as required by the claimed invention. Thus, the Cajole patent has no capability to provide one or more samples of the rendered first or second frames for the render job to the client prior to completion of rendering the first or second frames by the first and second servers as required by the claimed invention.

Independent Claim 8 recites ". . . the schedule server operable to provide one or more samples of the rendered first frame received from the first one of the plurality of render servers for the render job to the client prior to completion of rendering the first frame by the first one of the plurality of render servers." By contrast, as shown in col. 10, lines 34-37, of the Cajole patent, the assisting computer completes its portion of the task and then returns its results to the problem dispatcher. There is no disclosure in the Cajole patent that its assisting computer provides samples of rendered frames prior to completing its portion of the render job as required by the claimed invention. Thus, the Cajole patent has no capability to provide one or more samples of the rendered first frame received from the first one of the plurality of render servers for the render job to the client prior to completion of rendering of the first frame by the first one of the plurality of render servers as required by the claimed invention.

Independent Claim 14 recites ". . . wherein the remote rendering system is operable to provide one or more samples of the rendered first or second frames for the render job to the local rendering system prior to completion of rendering the first or second frames by the remote rendering system." By contrast, as shown in col. 10, lines 34-37, of the Cajole

patent, the assisting computer completes its portion of the task and then returns its results to the problem dispatcher. There is no disclosure in the Cajole patent that its assisting computer provides samples of rendered frames prior to completing its portion of the render job as required by the claimed invention. Thus, the Cajole patent has no capability to provide the local rendering system with samples of rendered first or second frames prior to completion of rendering of the first or second frames the remote rendering system as provided in the claimed invention. Therefore, Applicant respectfully submits that Claims 1-29 are not anticipated by the Cajole patent.

Independent Claim 21 recites ". . . providing one or more samples of the rendered first or second frames for the render job to the client prior to completion of rendering of the first or second frames by the first and second remote servers." By contrast, as shown in col. 10, lines 34-37, of the Cajole patent, the assisting computer completes its portion of the task and then returns its results to the problem dispatcher. There is no disclosure in the Cajole patent that its assisting computer provides samples of rendered frames prior to completing its portion of the render job as required by the claimed invention. Thus, the Cajole patent has no capability to provide one or more samples of the rendered first or second frames for the render job to the client prior to completion of rendering the first or second frames by the first and second remote servers as required by the claimed invention.

As shown above, each of the independent claims provide features not disclosed in the Cajole patent. Therefore, Applicant respectfully submits that Claims 1-29 are not anticipated by the Cajole patent.

This Response to Examiner's Final Action is necessary to address the Examiner's characterization of the cited art in support of the rejections to the claims. This Response to Examiner's Final Action could not have been presented earlier as the Examiner has only now provided the current characterization of the cited art in support of the claim rejections.
